

# Quantity Management

## What is Quantity Management?

It's a quality and safety program that promotes the safe use of medications. The program limits the amounts of some medications that we cover.

The Food and Drug Administration (FDA) has approved some drugs only for short-term use. And some drugs may not work as well or can even be harmful when you take more than the FDA-approved amounts.

We base the Quantity Management program on FDA and manufacturer dosing guidelines, medical literature, safety, accepted medical practice, appropriate use and benefit design. Our program only affects the amount of medication your benefit plan covers. You and your doctor should make the final decision about the amount of medication that is right for you.

## What Drugs Are Included?

The medications and limits that apply to your plan can vary. Medication limits can also vary depending on the medication strength. We post the most updated list of medications in the Quantity Management programs on our Web site. You can also view personal benefit information through our Web site.

The medications and limits in Chart 1 apply to some plans, while the medications and limits in Chart 2 or Chart 3 apply to other plans. Check your benefits booklet or talk with your Benefits department to determine which quantity limits apply to you.

For most medications, your plan will only cover a set amount within a set timeframe. Your plan will cover higher amounts of some medications when medically necessary. If a drug on this list has an asterisk (\*) next to it, you may be able to get a medical necessity override for a larger amount. If you need more of any of these medications, please have your doctor call the Caremark Prior Authorizations department at 800-294-5979. Your doctor can also fax requests to 888-836-0730. On behalf of your health plan, Caremark administers the Quantity Management program. Caremark is an independent company that manages pharmacy benefits.

## What Happens at the Pharmacy?

The pharmacist enters your prescription information into the computer system. If the drug has a limit on the covered amount, the pharmacist will fill your prescription as long as it does not exceed the limit. If your prescription exceeds the quantity limit, you have three choices.

1. Your pharmacist can reduce your prescription to the quantity your health plan covers.
2. You can pay full price for all of your prescription or for the portion that exceeds the limit.
3. You or your pharmacist can ask your doctor to get a quantity override if one is available.

If your plan approves the additional quantity, it will pay for it. If your plan does not approve it or the override is not available, you can still choose option 1 or 2.

If you submit your prescription to the mail-order pharmacy and do not meet the requirements for an additional quantity, the pharmacy will not fill your prescription. It will also not fill your prescription if an additional quantity is not available for that drug. The pharmacy will notify you by mail.
